

Brandon University selects Relais ILL and Relais Access

For immediate release

May 25, 2006

The John E. Robbins Library of Brandon University in Brandon, Manitoba has selected Relais ILL to automate their ILL and Document Delivery operations.

This system will include Relais Access, web-based pages, to allow patrons to request items from the Library as well as to inquire about the status of their requests. The system also includes the Relais Scanning Module to allow staff to scan and deliver items to their patrons electronically via a seamless interface to the Relais ILL system.

Brandon University will host the system on a Windows-based server running an Oracle database. They are running the Ex Libris Aleph integrated library system, and will use NCIP to share patron information between the Aleph system and the Relais ILL system.

Relais™ International Inc is based in Ottawa, Canada and has been selling systems to support interlibrary loan and document delivery services since 1996. Relais International (www.relais-intl.com) assists libraries in implementing intelligent and automated methods to support the delivery of documents. Relais products range from scanning stations through to fully integrated request management, scanning and delivery software suitable for a single library through to a consortium.
