Colorado State University Libraries go Live with Relais

Relais International is pleased to announce that the Colorado State University Libraries in Fort Collins, Colorado, have gone live with their implementation of Relais Enterprise. The library staff is using Relais to process lending requests. This is our first customer to use the new scanning & delivery interface for Widetek and Bookeye scanners.

Michael Richins, Interlibrary Loan Lending Supervisor, wrote "I want to note that Relais support has easily been the best support I've worked with on any of the products we've used for our operations. I very much appreciate all the help you have provided over the past few months to get us up and going."

CSU is hosting the Relais system on their server. Future enhancements will include integrating Relais with the RapidILL system which was developed and is run by CSU Libraries staff.

Relais™ International Inc is based in Ottawa, Canada and has been selling systems to support interlibrary loan and document delivery services since 1996. Relais International (www.relais-intl.com) assists libraries in implementing intelligent and automated methods to support the delivery of documents. Relais products range from scanning stations through to fully integrated request management, scanning and delivery software suitable for a single library through to a consortium.
