

The National Library of Australia selects Relais™ Enterprise

For immediate release

August 10, 2005

The National Library of Australia has selected Relais Enterprise for automation of their Document Supply Service.

Relais Enterprise fully integrates request management functionality with scanning and electronic delivery. The flexibility and functionality of Relais Enterprise will allow the National Library to make better use of staff, implement more efficient processes and better control the entire ILL lifecycle from the receipt of the request to the payments stage based on interoperability with KDD and other ISO ILL management systems.

Relais™ International Inc is based in Ottawa, Canada and has been selling systems to support interlibrary loan and document delivery services since 1996. Relais International (www.relais-intl.com) assists libraries in implementing intelligent and automated methods to support the delivery of documents. Relais products range from scanning stations through to fully integrated request management, scanning and delivery software suitable for a single library through to a consortium.

The **National Library of Australia** is the country's largest reference library. Its role is to ensure that documentary resources of national significance relating to Australia and the Australian people, as well as significant non-Australian library materials, are collected, preserved and made accessible either through the Library itself or through collaborative arrangements with other libraries and information providers.
